Application Frameworks (SE3040)

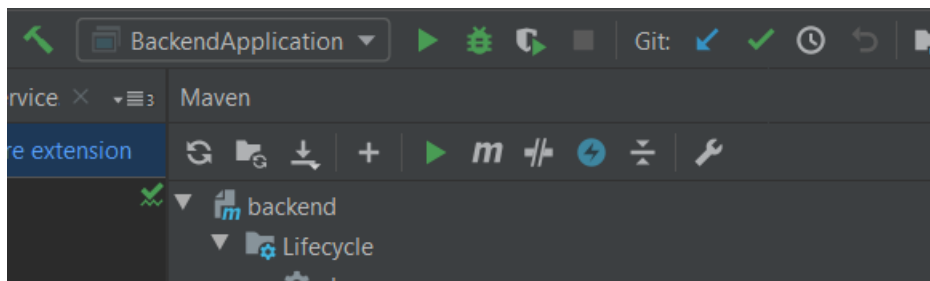

Year 3, Semester 1 – 2020

User Guide

1. Open main folder -> Open backend using IDE
2. You will be prompted to install Import maven dependencies, click it
3. Then a menu will be resulted as shown below

4. Click Install, once the terminal shows 'BUILD SUCCESS'
5. Run the Springboot application by clicking the green triangle

6. Once the application has finished running, the backend will be up.

7. Moving on to the frontend application, open folder with IDE
8. First run 'yarn install' (You might be prompted to run line by IDE or you can type this in the terminal)
9. When the installation is complete, run 'yarn start'
10. This will start the application.

Note: There is a delay in the loading of the Home page due Mongo Atlas running.
